

**IN THE CLAIMS:**

Cancel claims 8-10 without prejudice or disclaimer.

Please amend the claims as shown below:

Claim 1 (previously presented): A composition for enhancing the action of Vitamin A on the cellular activity of an individual, comprising a plurality of dispersed microspheres, said plurality of microspheres comprising Vitamin A and an antioxidant inserted into a first group of microspheres, and Vitamin C inserted into a second group of microspheres;  
wherein said microspheres are made of biologically active material.

Claim 2 (previously presented): The composition according to claim 1, wherein Vitamin C is present at a concentration of about 0.02% by weight, and Vitamin A is present at a concentration of about 0.009% to 0.02% by weight, based on the total weight of the composition.

Claim 3 (previously presented): The composition according to claim 2, wherein Vitamin C is contained in the second group of microspheres at a concentration of 0.02%.

Claim 4 (previously presented): The composition according to claim 3, wherein the first group of microspheres contains Vitamin A at an average concentration of about 0.014% by weight, based on the total weight of the composition.

Claim 5 (currently amended): The composition according to claim 4, wherein the first group of microspheres contains Vitamin A at an average concentration of 0.014% and Vitamin E at an average concentration of 0.0005% by weight, and cosmetic compounds selected from the group consisting of skin structures, micronutrients of the skin, sensory agents, solar protection factors,

emulsifiers, thickeners, sequestrants, antioxidants, fragrances, conservants, water and mixtures thereof,

wherein said skin structures are squalan and sphingolipide complexes,  
said micronutrients of the skin is seaweed extract, and  
said sensory agents are selected from the group consisting of moisteners, emollients, and  
silicones.

Claim 6 (previously presented): The composition according to claim 1, wherein the Vitamin C to Vitamin A weight ratio ranges from about 1:1 to about 10:1.

Claim 7 (previously presented): The composition according to claim 1, wherein the antioxidant is Vitamin E.

Claims 8-10 (canceled)

Claim 11 (currently amended): The composition according to claim ~~10~~ 5, wherein the moisteners are selected from the group consisting of glycerin, hydroxy prolisilan, and combinations thereof.

Claim 12 (currently amended): The composition according to claim ~~10~~ 5, wherein the emollients are selected from the group consisting of butylene glycol, cethyl lactate, and combinations thereof.

Claim 13 (currently amended): The composition according to claim ~~10~~ 5, wherein the silicone is cyclomethicone.

Claim 14 (previously presented): The composition according to claim 5, wherein the solar protection factors are selected from the group consisting of butyl methoxydibenzoyl methane, 3-(4-methylbenzylidene) camphor, and combinations thereof.

Claim 15 (previously presented): The composition according to claim 5, wherein the emulsifiers are selected from the group consisting of acrylates/C10-30 alkyl acrylate crosspolymer associated with trietanolamin, soybean lecitin, and combinations thereof.

Claim 16 (previously presented): The composition according to claim 5, wherein the thickener is xanthan gum.

Claim 17 (previously presented): The composition according to claim 5, wherein the sequestrant is ethylene diamine tetraacetate (EDTA).

Claim 18 (previously presented): The composition according to claim 5, wherein the antioxidants are selected from the group consisting of buthyl hydroxytoluene (BHT), dl- $\alpha$ -tocopherol, and combinations thereof.

Claim 19 (previously presented): A composition for enhancing the action of Vitamin A on the cellular activity of an individual, comprising a plurality of dispersed microspheres, said plurality of microspheres comprising Vitamin A and an antioxidant inserted into a first group of microspheres, and Vitamin C inserted into a second group of microspheres;

wherein said microspheres are made of biologically active material, wherein the Vitamin C is present in an amount effective for enhancing the action of the Vitamin A on the cellular activity of an individual.

Claim 20 (previously presented): A composition for enhancing the action of Vitamin A on the cellular activity of an individual, comprising a plurality of dispersed microspheres, said plurality of microspheres comprising Vitamin A and an antioxidant inserted into a first group of microspheres, and Vitamin C inserted into a second group of microspheres;

wherein said microspheres are made of biologically active material, and Vitamin C is present at a concentration of about 0.02% by weight, and Vitamin A is present at a concentration of about 0.009% to 0.02% by weight, based on the total weight of the composition.
